

## Enterprise Software

*A new approach to managing data*

### ADVANTAGES:

- Recover accurate costings (FEC) with rack map census
- Improve communication with calendar task schedule
- Save time with instant access to pedigree information
- Facilitate efficient order processing
- Reduce wasted resources via automated health reporting

**LabTracks** data management solution for the animal lab is a modern, high security, configurable application to meet the requirements of regulatory authorities, animal care staff and investigators. LabTracks provides practical and easy to use tools for management of animal orders, census, breeding, cost recovery, Home Office returns, animal health, task scheduling, staff training and more in one integrated system. Cage cards and reports can be designed and customized by the customer. Animal use is automatically monitored against protocols. Sick or injured animals can be electronically "tagged" during bed checks, resulting in veterinary notification via email. Colour coded views and strain naming in scientific notation provides easy identification of values. Individualized homepage and technician door sheets offer visual reminders of tasks.

**Software demos are available.**
